Quelle, Einleitung

*Till Leopold says*

- *today: the greater part of work is done by humans, this will change:*
- *by 2025: computers and robots will take over*
- *human work, however, will be augmented by machines → more efficient*
- *an estimated 75 million jobs will be lost by 2025*
- *this will happen in industry/production as well as (increasingly) in office work (e.g. accounting, any kind of repetitive jobs)*
- *this will also enable people to work more creatively*
- *estimated number of new jobs: 133 million*
- *it is difficult to say which kind of new jobs will be created as we might not know most of them yet,*
- *probably mostly jobs connected with technological development*
- *according to data from the US, people who retrain will be fit for new options and some of them will even earn higher wages*
- *those who for various reasons will not retrain will be an issue*
- *as a consequence, companies and unions will have to cooperate in order to meet the challenge worldwide*
